Mitja Kramberger *Engineering Lead & Consultant Engineer*

mitja.kramberger@gmail.com • 07874322134 • github.com/mkramb

Summary

I'm a methodical, quality focused full stack software developer who specialises in front-end web app, hybrid app, and RESTful API development. Experienced and highly proficient in platform architecting, highly versed in agile development practices and delivering high quality maintainable tested code. In addition, I possess excellent communication and client-facing skills. I have also held tech leading positions and executed my roles successfully, working well under pressure, results driven.

Specialties: Full-stack architecture and implementation using TypeScript, React, Node.js, Kubernetes and Serverless.

Highlights

- **DevOps and Agile** I have enabled workflows that would normally take hours to run, to run in under a minute, using cloud services and improving build tools across the organisation. DevOps is Agile applied beyond the software team.

- **Courage to spark change** A good example is winning hackathon at Atlassian and successfully shipping it. Continuous improvement is a shared responsibility, but action is an independent one.

- **Entrepreneurial experience** I was an early employee at startup DoubleRecall which was accepted into YCombinator incubator and also started few services which are now archived on github.

Experience

Photobox	London, United Kingdom
Principal Engineer	*Apr '19 – Present*

- Lead implementation of the Photobox Editor experience and advised on technical direction across the group.
- Onboarded a new team of contributors and introduced modern software engineering practices.

Cloudbees	London, United Kingdom
Senior Engineer	*Jun '18 – Apr '19*

- Lead the UI implementation for internal product kubeCD, which is now official addon for JenkinsX.
- Authored Component library based on internal styleguide Shipyard.

JPMorgan Chase & Co.	London, United Kingdom
VP Consultant	*Oct '17 – May '18*

- Advised on the technical direction of the group and provided solutions to difficult organisational problems.
- Authored DevOps pipeline (kubernetes), which allowed feature builds and simplified deployment process.

Lab49	London, United Kingdom
Senior Consultant	*May '17 – Oct '17*

- Lead UI implementation for internal MIFID2 project.
- Worked on complex UI components and integrations with ION platform.

Sapient Global Markets	London, United Kingdom
Manager Interactive Development	*Aug '16 – May '17*

- Authored development of internal web accelerator, which helped engineers starting a new project.
- Worked on PSD2 directive implementation for Lloyds at their Payments team, as a technical lead.

Lloyds Banking Group	London, United Kingdom
Technical Lead	*Apr '16 – Aug '16*

- Lead multiple UI focused teams, maintaining their build pipelines and supporting group Agile environment.
- Contributed to Lloyds skeleton app (initial code for all projects) and global UI Components library.

Sky	London, United Kingdom
Senior Engineer	*Jun '15 – Apr '16*

- Lead delivery for video on demand system and live content, by building their advanced SPA client.
- Advocated for technology excellence and ensuring that we follow the best practice.

Atlassian Software Systems	Sydney, Australia
Senior Engineer	*Jun '15 – Apr '16*

- Lead UI implementation of industry leading CI/CD server, Atlassian Bamboo.
- Ensuring we followed UI best practices and acted as a feature lead (across the whole technical stack).
